

Treating Cases of Occlusal Destruction With Full Mouth Reconstruction

Kiyokazu Minami, DDS

Dentistry encounters many diverse medical conditions that can influence esthetic demands and overall prognosis. Overall success is greatly influenced by periodontal disease. Whether in Japan or the U.S., the progression of periodontal disease can worsen with age; thus the correct periodontal diagnosis and management are critical.

Time: 8:30–11 a.m.
Audience: dentist
C.E. units: Core – 2.5

Learning Outcomes

1. Learn about force control and inflammation as well as the importance of case mounting with reference to intraoral photographs.
2. Importance of diagnostic wax-ups for provisional restorations.
3. Understand the importance of correct horizontal and vertical maxillo-mandibular relationship in reconstruction.

Considerations for Natural Teeth and Anterior Implant Aesthetic Restoration

Kiyokazu Minami, DDS

For a good prognosis and esthetic restorations, you must ensure the proper function of natural teeth and implants together. Diagnostic examination should integrate facial expression, the appearance of the teeth when the patient is at rest, smiling and the gingival contours. Success includes complete communication of protocols between the dentist and dental technician.

Time: 1:30–4 p.m.
Audience: dentist, RDH, RDA, dental student,
C.E. units: Core – 2.5

Learning Outcomes

1. Understand the appearance of the cuspids while the patient is resting or smiling.
2. Learn how correct esthetic outcomes can be maximized by provisional restoration mounting.
3. Understand materials and techniques of all-ceramic crowns.

The best of dentistry in the U.S., and now a worldwide perspective on dentistry.

While dentistry in the U.S. is breaking newground, the same can be said for alternative philosophies and treatment modalities the world over. Join us in a spirit of international camaraderie as we delve into new techniques and materials used by dentists across the globe.
